Leveraging the gaming industry & blockchain technology to tackle climate change

Disclaimer

PLEASE READ THIS DISCLAIMER SECTION CAREFULLY.

This presentation is for information purposes only. It should not be construed as an offer to sell, or a solicitation to buy any security or token. Evergreen Tribe/OxyApes is a Startup: A large part of this presentation therefore consists of "Forward Looking Statements" relating to: Plans and objectives of management for future operations or economic performance; conclusions and projections about current and future economic and political trends and regulations in the crypto currency and blockchain space; and projected financial results and results of operations. Projected financial results in this presentation are only samples for potential future profitability.

The information set forth below may not be exhaustive and does not imply any elements of a contractual relationship. While we make every effort to ensure that any material in this paper is accurate and up to date, such material in no way constitutes the provision of professional advice. Evergreen Tribe/OxyApes does not guarantee, and accepts no legal liability whatsoever arising from or connected to, the accuracy, reliability, currency, or completeness of any material contained in this paper. Investors and potential token holders should seek appropriate independent professional advice prior to relying on, or entering into any commitment or transaction based on, material published in this paper, which material is purely published for reference purposes alone. This paper does not constitute a prospectus or offer document of any sort and is not intended to constitute an offer of securities or a solicitation for investment in securities or other financial instruments in any jurisdiction. Evergreen Tribe/OxyApes does not provide any opinion on any advice to purchase, sell, or otherwise transact tokens and the fact of presentation of this paper shall not form the basis of, or be relied upon in connection with, any contract or investment decision. No person is bound to enter into any contract or binding legal commitment in relation to the sale and purchase tokens, and no cryptocurrency or other form of payment is to be accepted on the basis of this paper.

The ratio of oxygen & carbon dioxide is massively out of balance. We consume, produce much more than is sustainable and that causes a lot of problems.

Our animals are dying, glaciers are melting, we face elevated temperatures and we are headed for a self-destructive future.

Climate change **threatens people with food and water scarcity, increased flooding, extreme heat, more disease, and economic loss**. Human migration and conflict can be a result. The World Health Organization (WHO) calls climate change the greatest threat to global health in the 21st century.

https://en.wikipedia.org › wiki › Climate_change   ⋮

Climate change - Wikipedia ✓

The current carbon market is trying to solve this problem, but instead of improving, it has gotten worse.

The **forced** regulation of companies is not working as planned, the incentives are too small, the fines too low - they are looking for **loopholes**.

Climate change is happening now, and we aren't doing enough to stop it

There is almost no question that we must join forces to tackle **environmental problems.**

It's just that things that are fun & rewarding are exciting.

Current offsetting- & environmental contribution-solutions are

mostly not.

SO WHAT'S
MISSING

IN ESSENCE...

More meaning, real commitments, shared goals, community and decisions that matter.

A story to think about, to raise awareness and to participate in.

The New York Times

Yes, There Has Been Progress on Climate. No, It's Not Nearly Enough.

Let's face it.

Current climate actions are there, but just not enough.

Our Vision

Most current offsetting solutions are trying to make something new, but they are really just creating something boring and hard to engage with.

There is no community, tribe or communication.

That's why we are not building an offsetting tool.

We are building the interoperable, gamified carbon offset infrastructure with an eco-empowering gamefi base.

Why Gamified

The gaming industry is **bigger** than the music and video industry combined.

Let's present:

OXYAPES

OxyApes is a fun NFT game universe with environmental impact at its core. OxyApes pioneers sustainability and carbon negativity across blockchain, crypto, and NFT ecosystems.

Furthermore the OxyApes universe gives power and flexibility to everyone within the blockchain industry to make a real-world impact in a fun and engaging way via Plug & Play solutions.

We recognize **environmental contribution and reward it** within our ecosystem.
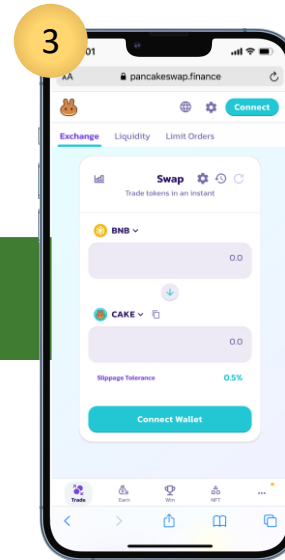

Homebase Game

Game Mechanics

Play

Play Mini-Games, build your home base, breed NFTs, create guilds, fight bosses and collect in-game items.

Earn NFT & Tokens

Gamers can earn NFTs and in-game tokens by accomplishing different tasks, collecting drops, and winning races. NFT lending will minimize the entry barrier and create a win-win for both holders and lenders through reward sharing.

Swap & Exchange

Homebase aims to help alleviate poverty by extra source income for gamers. Gamers can use major exchanges to trade tokens and NFTs and earn actual cash.
Impact

Oxyapes is dedicated to environmental activism. The game will reflect the collective action of players. While the sky is blocked by dark clouds and oceans are filled with trash, the sky will clear through player action, and the environment will become less polluted.
Infinite Runner

Game Mechanics

Play

Participate in tournaments through symbolic investment and compete with nine other users or fight all the obstacles and bosses within our campaign mode in the homebase.

Earn

Tournament:
Be one of the Top 6 best performing players and earn more than you paid for the ticket. In addition, players automatically participate in the weekly Extra Oxygen Release. The top 400 players receive additional $EGT tokens!
Campaign:
Achieve engaging milestones and get rewarded.
Environmental impact

Planting a single tree costs as little as $0.15. Considering the in-game taxation model, every two gameplays lead to one tree planting. The real-world impact is mirrored into the game and gives further benefits.

Combating Unemployment

Our tree planting partner Eden reforestation project employs local community members across nine nations and creates over +1200 sustainable employment opportunities.

Have a positive effect on the environment

PROOF OF PLANTING

- A GPS-mapped boundary of the planting site
- Exploratory/Pre-planting photos (of the deforested area)
- Initial Planting photos
- Continuous photo updates at 6-month intervals
- Annual written reports with forest monitoring information, and social impact updates.

- Some of the photos added to your photo album will contain images embedded with coordinates, altitude, day/time taken, etc. (via various surveying instruments such as theodolite).

Core Team
Founder & CXO's

Evergreen Tribe embraces remote-first culture to attract top talent and promote diversity. While the founding team is based out of Zurich, Switzerland, EGT-team brings together talent from more than ten nations expanding from New York to Dubai, from and all the way to Australia and Mexico.

Christopher Sengupta
Founder & CEO

Christopher Sengupta comes from extensive finance, banking, and investment management background. He worked for major financial institutions in Switzerland before his entrepreneurial journey. Christopher founded one of the leading performance-based digital marketing agencies in Europe. Creative Media Agency forces in building efficient user journeys for real estate, hospitality, and fitness/health industries deploying cutting edge proprietary technology for precision targeting. The agency specializes in generating ROI for initiatives in its niche. Christopher Sengupta founded OxyApes to become industry standard in the blockchain industry by placing environmental impact as its focal point.
He is responsible, committed, persistent, goal orientated, courageous, a nature and runner game lover.

Jeniffer Almendárez
Chief Operation Officer

Jeniffer Almendárez is an expert in planning operations, logistics, and project development.
Her expertise comes from working for more than 17 years in an international leading organization.
Jeniffer is a creative leader focused on service and creating memorable experiences for our tribe. She holds a degree in communication sciences from the University Nuevo León, Monterrey

Jilbert El Zmetr
Chief Technology Officer

Jilbert brings a career in technology that spans over 20 years across multi-disciplines but with one common theme, disrupting the status quo. His passion for the environment, sustainability, and all things planet earth will help guide Evergreen Tribe's sustainability-focused initiatives and experiences. His goal: give users of our ecosystem real insights into their impact on the planet and how we can all do good for the earth through blockchain technology.
He brings centuries of ancestral wisdom, pragmatism, open-mindedness and a constant hunger to learn more to our growing tribe.

Vugar Adigozalov
Chief Marketing Officer

Vugar Adigozalov is an award-winning marketing and communications expert with 12 years of progressive experience. He worked with Fortune 500 companies and unicorn startups helped raise + $1 Bln funds and IPO. Vugar holds an MPA'21 degree from Harvard University and conducted post-graduate studies at Saïd Business School, University of Oxford.
He brings the extra energy for our tribe's growth, a sense of belonging and the right skills combined with caring excellence.

Sameer Bakhru
Chief Financial Officer

Sameer Bakhru is a CFA charter holder with over a decade of experience in investment. He is a blockchain specialist and has been involved in the industry for 3.5 years. Experienced in virtual investment banking, Sameer is engaged in fundraising, M&A, security token offerings, initial coin offerings, and tokenomics.
He loves giving back, brings entrepreneurial creativity, and helps the tribe keep their feet on the ground.

Team

Game Development Studio

65 years of Combined experience in developing high quality video games

Sagar M

Developer

Created more than 400 Smart Contracts.

Alberto Rojas

Graphic Designer

Passionate graphic designer and illustrator, did more than 600 designs for clients.

Carlo Brudermann

Community Manager

Has been successfully accompanying people into the crypto space since 2017.

Strategic Advisors

Willy Kerr

Willy is a Venture Capitalist and an entrepreneur with vast experience in many different business models. Willy has proved to be a top entrepreneur and an agile mind for helping projects grow in each aspect they are required.

moonboots

Moonboots Capital is a gathering of blockchain professionals seeking to support the advancement of decentralized blockchain technology through strategic investment, network penetration, and various services and resources. They are a grassroots value adding venture capital collective who step beyond the bounds of simple capital injection and help to foster and nurture the projects they work with.
Ian Scarffe

Ian Scarffe is a serial entrepreneur, investor and consultant with business experience from around the world. A leading expert in Startup, Investment, Fintech and Blockchain industries. Ian currently consults and advises for a range of multi-million dollar companies.

Apprendix

Product

Technology Stack

Unity Game Engine

Unity is a cross-platform game engine developed by Unity Technologies. Unity empowers creators across industries and around the world.

Binance Smart Chain (BSC)

$EGT tokens are developed on Binance Smart Chain; a blockchain made to run smart contracts. Binance focused on preventing network congestion in its design. **Alternative blockchains like Cardano are being explored now.**

Akash Decloud

Infrastructure, API gateways, hosting of computing resources, and internal Time Series Databases for transaction logging

Using de-centralized cloud infrastructure/services to re-use potential wasted resources - with a keen eye for security and stability

Solidity For Smart Contracts

Solidity is an object-oriented, high-level language for implementing smart contracts. Smart contracts on various blockchain platforms, most notably Ethereum, are executed on Solidity.

De-centralized Resource Focuse

DevOps for collaborative teams.

- Embracing Diverse DevOps Models
- Learning Agility
- Innovation

Carbon Offsetting

Carbon footprint analysis is based on energy use, transactions' geography, and node location through predictive modeling.

Target Audience

User Profiles

Ultimate Crypto Gamer

Already plays or played a P2E game. Follows releases of new crypto games and is ready to invest, understands the concept, and enjoys playing.

Gaming Influencer

Loves playing new games is a crypto watcher. Well informed about the latest release, it does not only play but also streams and influences communities.

All-Round Enthusiast

Enjoy playing all kinds of games and informed about the P2E concept, interested in crypto and NFT, owns a wallet yet waiting for the next big thing to invest.

Time Filler

Games only when having time to relax prefers mobile games as a social distracter. Is interested in crypto but never invested, open to learning and exploring.

OxyApes Player Community

Building a community of 200,000 players in three months split testing with countries
WAITLISTED

Through the email subscriptions, prize draws, and carbon offset tool, we aim to build a community excited about the OxyApes launch. +10,000 Users

VENEZUELA

We aim to attract + 40,000 users in Venezuela through paid ads, influencer marketing, and media coverage.

$ 0.57 Cost Per Player Acquisition

$ 1.09 Cost Per Paying User Acquisition

USA

The USA will be the first developed market Oxyapes will enter to attract a user base with high disposable income. While we will experiment in a mature markets. Initially, we will onboard 10,000 users in 3 states before the nationwide rollout.

Strategy
Go-to-Market

Emission Calculator

State of the art emission calculator and carbon offset service aims to become an industry standard. The goal is to build a community of + 10,000 wallet holders at the initial stage.

Lucky Draw

Luck winners of the draw will earn chances to unlock token and NFT gifts, investment opportunities, and early access to the game. The goal is to gather the attention of +30 K waitlisted players.

Public Launch V1.0

The public launch aims for hyperbolic traction with a mature V1.0. The global launch will follow several stages, starting from Malaysia and Venezuela, then will follow Indonesia, the Philippines, and the USA; global access will be enabled at the third stage.
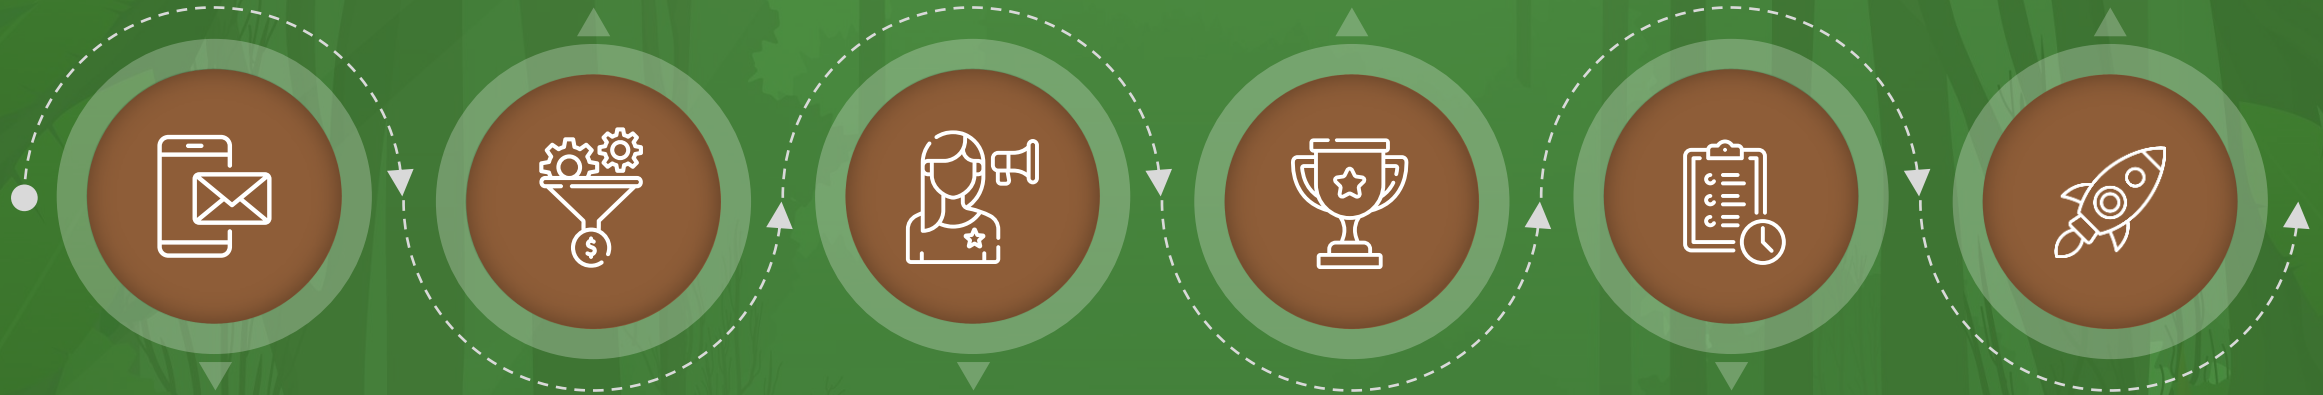

Early Traction

OxyApes started to gain traction through social media, messaging apps, and email collection. The goal is to attract 50 K email subscribers and a community of + 100 K across social media and messaging.

Sneak Peek

The invitation-only private launch will allow influencers and trendsetters to access the game the earliest and test it before going live. At this stage, we aim to get coverage from top media and access a broad community of + 10 mln crypto games.

Waitlisted Launch

Users who participated in a lucky draw and wallet holders registered for carbon offset will now have access to play the game, invest, and experience it at its fullest.

Total projection- **2 year** runway.

Revenue generation starts after **6 months**.

Positive Impact

Environmental Impact

A single transaction on Ethereum, uses more energy than the average American family does in an entire week.

A single Ethereum NFT transaction typically soaks up around 180 KWh, leaving a carbon footprint estimated to be around 22.4kg CO2 to 48kg C02.
Ethereum uses around 86.24 TWh of energy per year, which is comparable to the entire annual energy usage of the nation of Finland.

1 Terawatt hour [TWh] = 1,000,000,000 Kilowatt hour [kWh]. It translates to a carbon footprint of 40.96 metric tons of carbon dioxide equivalent (Mt CO2).
1,000,000,000 TREES

6 trees offset 1 tone of CO2. 1 Tree = 0.16 tons CO2

14 transactions = 1 tree

1,000,000 transactions a day 71,428 trees a day = 26 million trees a year

14 single transactions neutralize the CO2 sequestration capacity of a beech tree over a lifespan of 80 years.

Planting 1,000,000,000 trees could end the climate crisis in one go.
