One Small Town White Paper

SUMMARY

IMAGINE

Imagine a perfect world full of harmony and abundance. The kind of world most of us have dreamed of all our lives. This world is possible and we are creating it for ourselves – not somewhere in the distant future, but now, in our own lifetime.

PREAMBULE

The socio-economic structure of our country and our world has failed us dramatically. The freedom that our forefathers strived for is in danger of being lost forever. Our global socio-economic system is broken – It cannot be fixed. We are creating a NEW SYSTEM – without any violence, opposition or conflict. A new system of prosperity and abundance for all – that will make the existing system obsolete.

We can no longer sit idly by, watching the destruction of our towns, our countries, our world, and human potential, by greedy corporations, supported by governments with no remorse for its actions, or accountability to the people they are supposed to serve.

We can no longer sit silently, hoping that someone will do something to stop this assault on our liberties and future prosperity.

It has fallen on the shoulders of the common people to unite and create a new way, a new system and a beautiful life for ourselves and our children.

The Ubuntu movement has a simple plan to turn our small towns into places of abundance and prosperity for all the people. A system in which there are no hurdles to progress or restrictions on personal growth of the people.

Communities that will support and promote unbridled creative expression in all areas of our lives – arts, culture, science, technology, healthcare, environment, architecture, agriculture, and all other areas of human activity.

But in order to create such harmonious communities, we, the people, must lead a Revolution of Consciousness, without the need for any violence, opposition or conflict – by simply creating a new alternative – a new system – a new way of doing things – because the old way simply does not work for us anymore.

We are creating a new system in which we turn competition into collaboration. A new society in which we all benefit from our collective efforts and individual talents. We will no longer be the slaves that enrich the corporations and a few powerful individuals.

OUR INSPIRATION

"Ubuntu" is an African expression of ancient wisdom, which is echoed by all ancient civilizations. It simply means "unity within community" where everyone contributes their natural talents or skills for the greater benefit of all.

The Native American **Cherokee** have a similar philosophy that says; **"if it's not good for everyone, it's no good at all"**. This philosophy is one of the founding principles of our proposed system, which we call **Contributionism**.

Since 2005, our philosophy has evolved through many phases. We have learnt a great deal from many activities, in many countries. Our journey through trial and error has led us to the plan we call:
ONE SMALL TOWN – Can Change The World.
ONE SMALL TOWN – Will Change The World.

This simple plan provides a blueprint for a new social structure, which delivers freedom from financial slavery to the whole town and everyone who participates.

Ubuntu Planet, is a humanitarian initiative, registered as a non-profit company focused on creating the first **One Small Town**, to lead by example, and serve as a model for all other towns anywhere in the world. The objectives are very simple and very achievable – but it will require us to WORK TOGETHER – UNITED.

Our objectives:
• Unite the people in a simple vision and objective
• Make our town as Investor Friendly as possible
• Where possible, provide our town with our own supply of electricity, which will support all our activities and liberate the town from reliance on the electricity grid.
• Rejuvenate our town with diverse industry and innovation that will provide work for everyone – not just the chosen few.
• Support our inventors and scientists to create new technologies on every level which will include an alternative energy supply that is eco-friendly and provides electricity at no cost to the community.
• Support our farmers to grow an abundance of organic food and banish GMO companies like Monsanto that are destroying our seeds and food security.
• Support our healers to develop new methods and technologies that truly heal people, and provide cures for most diseases, which many of us know is possible.
• Ensure the growth of traditional healing plants and prevent the pharmaceutical mafia from eliminating these plants.
• Support our teachers to develop an alternative education system that teaches our children real skills for life and opens their eyes to infinite possibilities.
• Support our Master Craftsmen to share their knowledge and skills with those who wish to learn.
• Evolve into communities free from the economic stranglehold created by corporate greed and the banking cartels.

REVOLUTION of Consciousness

This revolution of change happens not with guns or violence like our forefathers, but with the perspective that change can happen within a community based on our combined efforts. We are **"Using the Tools of Enslavement as Tools of Liberation."** Existing laws and financial structures will be used to create these communities of abundance.

IMPLEMENTATION PLAN

Please watch the Implementation Crash Course VIDEO for clear outline of the simple implementation plan for ONE SMALL TOWN.
https://www.youtube.com/watch?v=a9uCyZcpt-k

PRIORITIES

The first priority for every small town is to create abundant water supply, agriculture and food security. This may require indoor and permaculture farming in addition to livestock, dairy, bakery and a diverse food production effort. Other industries will be created based on resources of the town and products/services that are in demand.

EVOLUTION

The goal of Contributionism is to achieve freedom and abundance for all community members. To do this, it is necessary to transition to a society with a primary focus on cooperation rather than capitalist competition.

All needs and wants of the community will be provided through the shared efforts of labor to create abundance. The goods and services created will be sold outside the community and to non-contributing town members for a profit.

We recognize the need for money for interactions outside of the community, but within the community there will, eventually, be no need or use for money, allowing for the transition to an abundant moneyless community.

We trust that the financial distributions of profits to community members will create a higher level of steady income than current employment, allowing the members to free themselves from undesirable "jobs" and commit to more active participation in community projects of their choice. Very soon, we will birth a community where we can create, build, grow, invent, invest, and implement anything we desire because the obstacles to progress have been removed from our society.

It all begins with ONE SMALL TOWN.

TECHNOLOGY

To help in achieving this abundance for all, the UBUNTU Planet NPC launched 5 major projects, designed to work together and strengthen the Contributionism vision.

One Small Token

Our One Small Token, that we called the ''Mite'', is a cryptocurrency token with the aim of getting funds for the development of the Ubuntu blockchain, the Regenico NFT Marketplace and most importantly getting the businesses of our signed towns up and running at full potential.

3 types of persons or institutions are foreseen to participates in the purchase of our token :
- PATRON : Supporter of the OST plan and accomplishment of Contributionism in the world. Expect nothing back but the satisfaction to be part of the creation of a new world.
- INVESTOR : Holder of the OST token, ideally believe in the OST plan on a conscious level. Will be able to purchase a NFT that represents a share in a business and will earn a dividend while holding it.
- TRADER : Volatility players, traders are more capitalism oriented and therefore less desired to participate in our project.

Ubuntu Blockchain

We will use the blockchain technology in the most effective way, to streamline all our projects, labour and delivery.
The ''Mite'' will initially be created as a native token on the Cardano blockchain.
Eventually, to be as decentralized and independent as possible, it will migrate to its own blockchain, the Ubuntu blockchain. We aim to take up the challenge of developing our own dedicated protocol.
As the Ubuntu blockchain is developed, the ''Mite'' will have more utility value.

Regenico NFT Marketplace

Investors will be able to purchase NFT with the ''Mite'' through a dedicated marketplace, the Regenico portal, where each collection represents a town and each NFT a share in a business of the said town.
Holding NFT guarantee to the investor to receive dividend from the business benefits.
The marketplace will represent our planet Earth, which rotates to the town/collection, with a zoom to the storefront, with videos and details of the provenance of the art (on the NFT) and the community business the purchase will support.
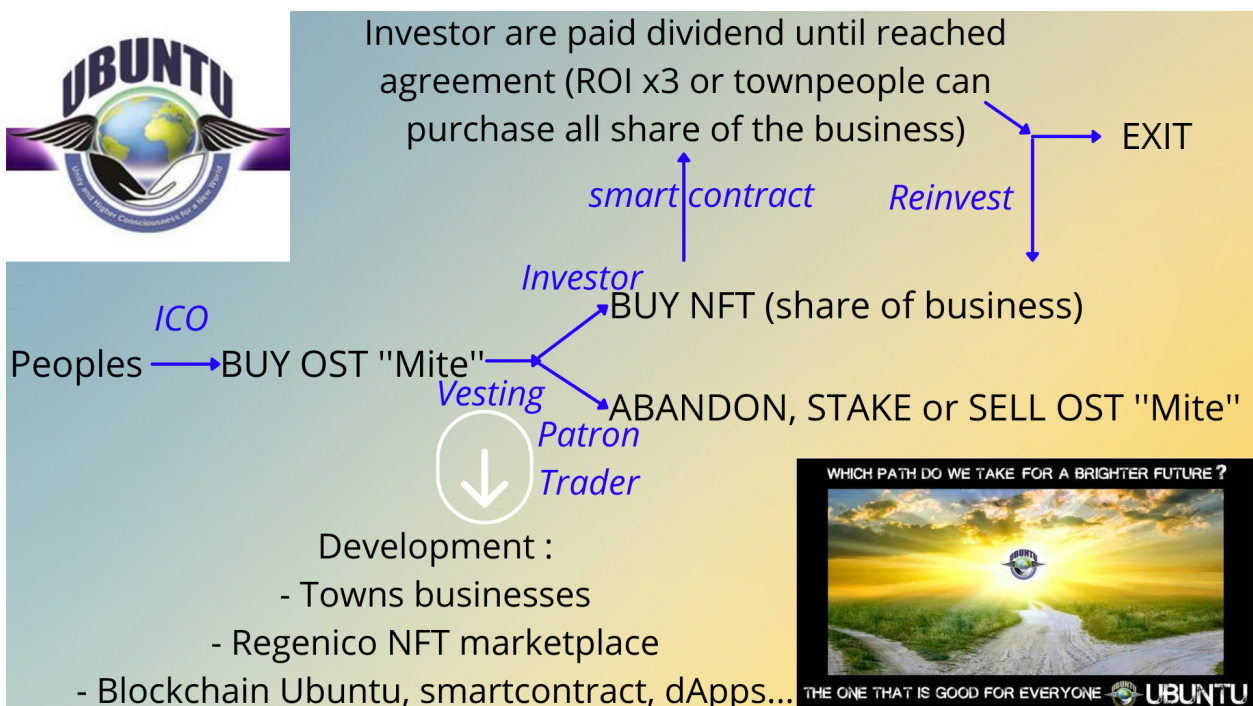

OST token wallet

A wallet will be developed to allow investors to stake their ''Mite'' to earn income, but also for townspeople to time bank their 3 hours a week contribution in the form of a Labour of Love token.

Smartcard

A smartcard will store all townspeople necessary information like skills and abilities, Labour Of Love accumulated, business share or knowledge. Connected to the blockchain, anyone could instantly prove his/her identity as contributing member. Even move to a different town and be recognize as an OST member.

HOW DOES IT WORK ?

- The townspeople and external investors share ownership of high value businesses that regenerate the very essence of the small town using a unique model that brings the best products to the most people at the lowest costs.

- The opportunity for impact investors to share in the many well planned and ready businesses is made by investing either fiat money or crypto currency via Regenico NFT marketplace to acquire ownership of shares of businesses. External investors can own up to 1/3 of the active businesses in each town. The townspeople through their weekly contribution of time will own the other 2/3 of these businesses.

- Each small town will have meticulously reviewed and executable business plans for existing businesses and new businesses that strive to meet unmet needs with under utilized resources. The townspeople commit to each giving three hours a week to the businesses that are deemed the best fit for generating sustainable profits while adhering to the highest environmental, social and governance standards. These can be naturally ensured as the owners of the businesses are the actual townspeople.

- Using the Regenico portal the investors' investment (Fiat or Mite) is converted to NFT and they have the option to either allow One Small Town to invest into the business and services that are needed to best generate returns on investments. Or the investor can also select the country, the town and the business they wish to have their funds invested in. The use of blockchain smart contracts makes for the perfect peer to peer agreement. The liquidity and holding term of the investors funds will be agreed upon by both parties. The investor can choose to look at either having an open ended term for their engagement of funds within the town projects or have an agree exit strategy for when they wish to have their Mites released back to them for either to hold and exchange on the open crypto market or have the OST redeem the Mites to fiat currency at agreed price.

- The investor can stake their Mites and direct the passive earned income to fund the OST town and businesses with the same flexibility as a direct investment. The income from the stake will be in the form of Mites which are used by OST to fund the businesses.

Investor are paid dividend until reached agreement (ROI x3 or townpeople can purchase all share of the business)

EXIT

smart contract   *Reinvest*

Investor
BUY NFT (share of business)

ICO
Peoples ⟶ BUY OST "Mite"

Vesting

ABANDON, STAKE or SELL OST "Mite"

Patron

Trader

Development :
- Towns businesses
- Regenico NFT marketplace
- Blockchain Ubuntu, smartcontract, dApps...

WHICH PATH DO WE TAKE FOR A BRIGHTER FUTURE ?

THE ONE THAT IS GOOD FOR EVERYONE   UBUNTU

The entire ecosystem of the One Small Town will operate on the Ubuntu blockchain.

- o One Small Town ambassadors, directors, elders, advisory counsel will be allocated an agreed upon number of Mites held in the treasury for a predetermined time line (see vesting in Tokenomics).
- o The consensus contribution model will require a blockchain application for secure voting, ranking and approval of the businesses.
- o The transparency of the blockchain will ensure accountability and effective time and resource management of the many projects.
- o The time bank of townspeople will be recorded and a certain number of Labour Of Love tokens will be added to their own OST wallet. These tokens will represent their value in the One Small Town Project and not just the company they chose to work for.
- o One Small Town will have many skilled craft persons, trade persons, professionals, managers, artists, designers etc. who will earn and have a blockchain identity that confirms their unique skills. This identity travels with them if they change companies or go to another town.
- o The best way to learn is by teaching others. Townspeople who share their skills and knowledge by training or teaching others will earn valuable LOL tokens that will be added to their OST wallet.
- o The time and skills taught as a teacher or student will be recorded on the blockchain.
- o The level of knowledge attained will be recorded on the blockchain and the individual will own this part of their identity. This will ensure that no one will be asked to perform work they are not qualified for. Individuals can access all learning.
- o All the products and services created in the town are fully accessible to the townspeople who contribute their time. The blockchain will record in real time the products and services popularity and demand. This will ensure timely tracking of resources to best serve the desires and needs of the townspeople.
- o Townspeople can spend their LOL tokens in the Regenico Marketplace on goods and services not produced by the OST business such as a piece of art or clothing. However, the tokens have a demurrage element that erodes its purchasing power over a pre planned time period. This helps with the multiplier effect of the local economy and stops any hoarding of the tokens.
- o Many other uses of tokens and the blockchain will arise and will require a robust platform, especially for trading of goods and services with other One Small Towns or transparently disclosing all the ESG measures that are demanded for any of the OST businesses to be approved.
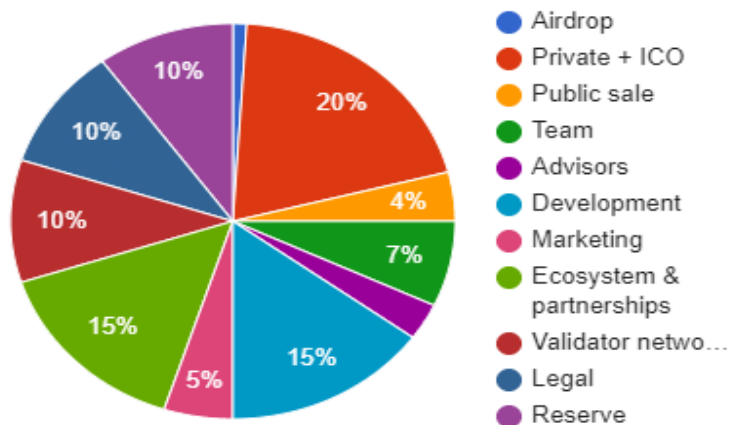

TOKENOMICS

One Small Token : The ''Mite''

Symbol : OST   Blockchain : Cardano ADA

Total supply : 333 666 999 OST

One Small Token

VESTING PERIOD :

Airdrop	Locked for 3 months after listing, 50% on first release, then 25% three months later and 25% again six months later.
Private + ICO	Locked for 9 months, 10% on each release for 10 months.
Public sale	10% first listing, then 10% a month for 9 months.
Team	Locked for 18 months, 6% on first release, then equal parts of 2% over a total of 47 months.
Advisors	Locked for 9 months, 10% on each release for 10 months.
Development	Locked for 12 months, 8% on first release, then equal parts of 2% over a total of 46 months.
Marketing	Locked for 3 months, 4% on first release, then equal parts of 2% over a total of 48 months.
Ecosystem & partnerships	Locked for 6 months, 4% on first release, then equal parts of 2% over a total of 48 months.
Reserve	Locked for 18 months, 6% on first release, then equal parts of 2% over a total of 47 months.

ROADMAP

Q1 2022 : OST token
Q1 2022 : Phase ICO
Q1 2022 : OST businesses start up
Q2 2022 : Public sale
Q3 2022 : OST wallet
Q3 2022 : Regenico NFT
**Q3 2022 : Smart contract dividend**
Q4 2022 : Ubuntu blockchain
